Aim

To design and develop a Bank Loan Application Form in Zoho Creator by creating two Kanban reports and a dashboard using UI Builder. The application organises loan applications based on Loan Type and Employment Type, allowing bank staff to easily view and manage applications.

Procedure

1. Log in to Zoho Creator and create a new application named Bank Loan Application Form.
2. Create the form Loan_Application_Form.
3. Add the required fields using the Basic Fields available in Zoho Creator: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.
4. Organize the form into four sections: Applicant Details, Contact Details, Loan Request Details, and Scheduling & Declaration.
5. Configure field validations such as mandatory fields, email validation, phone validation, number range of 1–30 years for loan tenure, and restriction of past dates.
6. Submit five sample loan applications to create sample records.
7. Create the first report named Loan_Application_Report.
8. Select Kanban as the report format and group the columns by Loan Type.
9. Create the second report named Employment_Type_Report.
10. Select Kanban as the report format and group the columns by Employment Type.
11. Create a custom page using UI Builder and name it Loan_Application_Dashboard.
12. Add the two Kanban reports to the dashboard.
13. Arrange and save the dashboard so that bank staff can view loan applications loan-type-wise and employment-type-wise.
14. Preview/publish the application and verify that the submitted records are displayed correctly in both reports and the dashboard.

Reports and Dashboard Overview

The application is built on a single form, Loan_Application_Form, which stores every loan application along with the applicant's details. Two Kanban-style reports are created on top of this form so that staff can view the same records grouped in different ways, and both reports are then combined on a single custom page (Loan_Application_Dashboard) built with UI Builder for a consolidated, at-a-glance view.

Component	Format / Grouping	Purpose
Loan_Application_Report	Kanban, grouped by Loan Type	Lets staff see how many applications fall under each loan type (e.g. Home Loan, Personal Loan, Education Loan, Vehicle Loan, Business Loan).

Employment_Type_Report	Kanban, grouped by Employment Type	Lets staff see applications organised by the applicant's employment status — Salaried, Self-Employed, or Student — as separate columns of cards.
Loan_Application_Dashboard	UI Builder custom page	Brings both Kanban reports together with supporting charts and summary widgets (applications pending, applications rejected, loan tenure requested, purpose of loan) on one page.

Explanation of Screenshots

The following screenshots show the Loan_Application_Dashboard as rendered in Zoho Creator after the sample loan applications were submitted, along with the Kanban report grouped by Employment Type.

1. Dashboard — Loan Tenure Requested

The top section of the Loan_Application_Dashboard shows the Loan Tenure requested across submissions. The first widget is a bar chart plotting how many applications asked for each loan tenure (in years), and the second is a line/trend widget plotting the Loan Tenure against the Purpose of Loan, letting staff quickly spot which purpose is associated with the longest repayment periods.

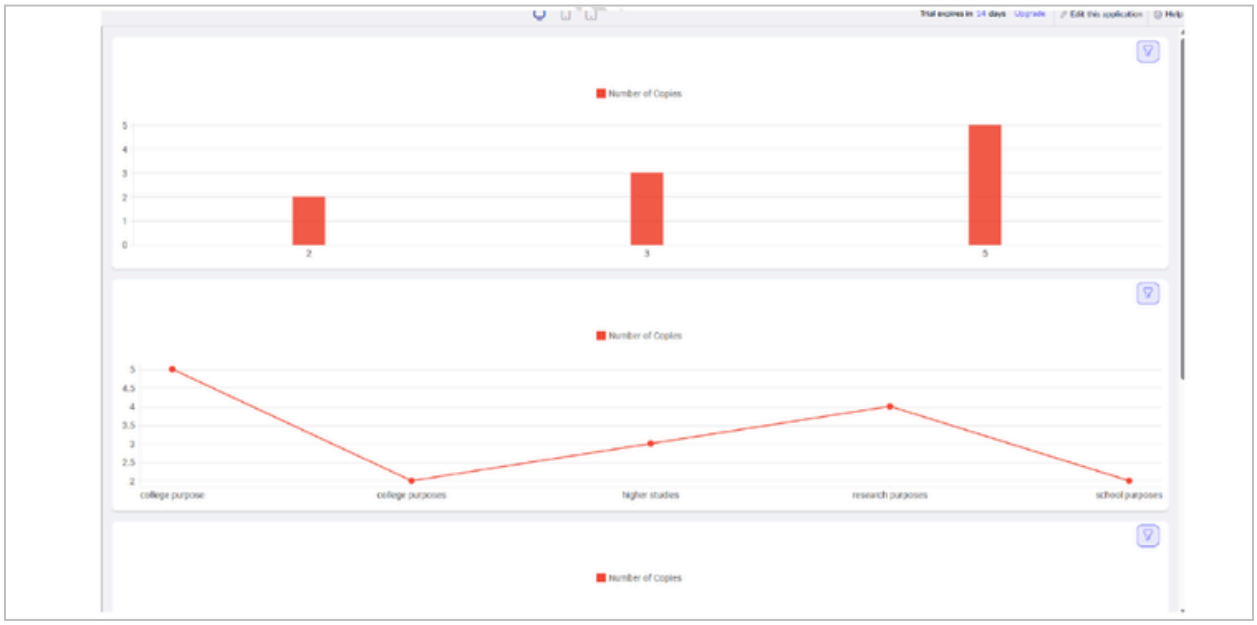

Fig. 1 — Dashboard: Loan Tenure by application and by purpose of loan

2. Dashboard — Category-wise and Timeline Widgets

Scrolling further down the dashboard shows the Purpose-of-Loan trend continuing at the top, followed by a radar chart that plots the Loan Tenure requested against each Loan Type — Home Loan, Personal Loan, Education Loan, Vehicle Loan, and Business Loan — and a semi-donut widget that breaks down applications by their Preferred Disbursement Date.

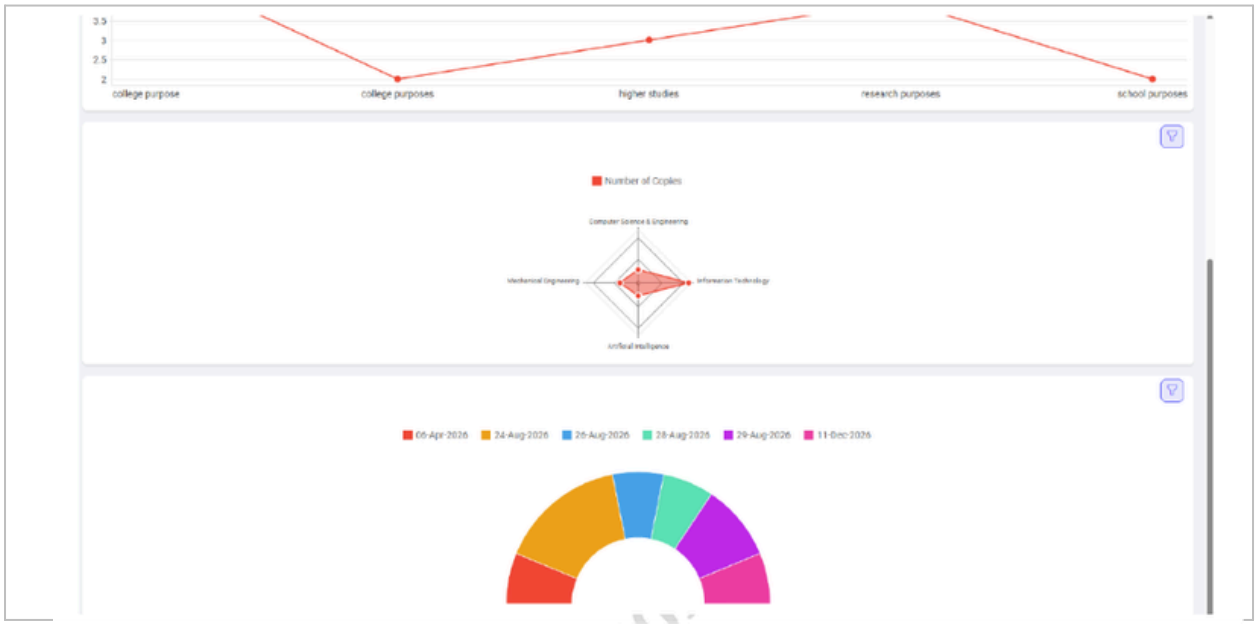

Fig. 2 — Dashboard: category-wise radar chart and disbursement-date distribution

3. Dashboard — Distribution Charts, Status Cards, and Applicant Records

The lower part of the dashboard shows a donut chart comparing the purpose-of-loan values, a bar-style summary of applications by Loan Type, and two pie charts — one splitting applications by Loan Tenure and one splitting applications by Employment Type (Salaried / Self-Employed / Student). Alongside these, an Application Status panel lists the count of pending applications per loan type, and two status cards report the number of Applications pending and Applications rejected. The All Loan Applications table beneath the charts lists each applicant's Name, ID number, Employment type, Email, and Contact number, confirming that the underlying Applicant Details data feeding the dashboard is captured correctly.

4. Kanban Report — Grouped by Employment Type

The Employment_Type_Report, when switched to Kanban view and grouped by Employment Type, arranges the submitted applications into columns headed Salaried, Self-Employed, Student, and Deleted & Others. Each card shows the applicant's name and ID number, giving staff an immediate, drag-and-drop friendly view of which applications are in progress under each employment type.

Output

The Bank Loan Application Form was successfully created in Zoho Creator with:

- Loan_Application_Form containing all 13 Basic Field types.
- Loan_Application_Report in Kanban format, grouped by Loan Type.
- Employment_Type_Report in Kanban format, grouped by Employment Type.
- Loan_Application_Dashboard created using UI Builder, containing both Kanban reports.
- Five sample loan application records displayed successfully.

The application provides a structured and user-friendly way for bank staff to view, categorize, filter, and manage loan applications.
